## PREFACE.

IN the plan of this Atlas the unequal division of space between the two hemispheres, which often is a marked characteristic of works of its kind, has been avoided. The United States, with Canada, Mexico, the other portions of the two American continents, and the West Indies, have been exhibited with great detail; and a closely corresponding degree of completeness will be found in the maps of the more important sections of Europe, Asia, and Africa. The practical needs of the user, as regards all parts of the earth's surface, have thus carefully been considered; and by devoting a relatively large share of space to those sections, both of the New World and the Old, about which information is most likely to be desired, an exceptionally large amount of serviceable geographical information has been brought within a volume of reasonable bulk. The double-page maps devoted to all parts of the globe number 120, and the corner or inset maps about 145; to these are to be added the pages of historical maps, which raise the total number in the Atlas to about 305.

All the maps have been made especially for this Atlas, and have been based upon the latest and best official information, with a comparison of the results of recent explorations. Those of the United States are founded upon maps issued by the United States government, and also upon many others published by State and local authorities; those of England, on the map of the Ordnance Survey; and those of all other countries upon similar authoritative materials. The railroads, which are printed in red to increase the legibility and attractiveness of the maps, are shown in accordance with the most recent official information; the figures for depth of water in seas, bays, and harbors have been taken from the British Admiralty charts and those of the United States Hydrographic Office; the heights of mountains and the elevations of lakes are those given by the latest surveys; and the various political divisions are exhibited in accordance with the most recent adjustments.

In portraying the mountain systems of the United States a feature has been introduced which is a novelty in general atlases, namely, lines of equal elevation above the sea (contour-lines), which have been printed in olive or brown. These have been taken from the published results of the Government Surveys, and are given for elevations of 100, 500, 1,000, 2,000 feet, etc. This method has been extended to the maps of Mexico also, by means of determinations furnished by Mr. H. M. Wilson of the Geological Survey.

The selection of names of places has been determined, in general, by their population; the intention has been, however, to include, as far as possible, all places, however small, which are of considerable interest from their historical significance, or to the tourist. In the spelling of these names the authority followed (with a few exceptions) for the United States has been the United States Postal Guide; and in other countries in which characters identical, or nearly identical, with those of the English alphabet are used, the local spelling has been adopted, except for certain names for which well-established Anglicized forms exist. In such cases the local or native spelling or name is placed under the English form. Wherever, as in maps of Africa and the East, it is necessary to give to entirely foreign names an English dress, the use of accented letters and of extreme and unusual methods of spelling has been avoided, and those forms (among the many existing and permissible) have been chosen which seemed likely to be the simplest to an English eye. Where several familiar spellings of important foreign names exist, these spellings (particularly those recorded in "The Century Cyclopedia of Names") are entered in the index. These place-names are, as a rule, printed in type graded in size according to the population; but the most detailed information on this point will be found in the population figures which are given in the index for all places of considerable size. The number of names of all kinds given in the Atlas, and recorded in the index, is about 170,000, a total considerably larger than that found in most atlases heretofore published.

Besides the general geographical and political matter, a number of details have been added to this Atlas which are not usually included, and which give it exceptional completeness as a work of reference.

Among them are the main routes of discovery and exploration in North America (Map No. 4), the West Indies (Voyages of Columbus: Map No. 67), South America (Map No. 69), Africa (Map No. 109), Australia (Map No. 115), and the North Polar Regions (Map No. 3, which shows all important routes down to and including those of Peary, Jackson, and Nansen); the marking (with the addition of dates) of a large number of sites of important battles, ancient and modern, on land and sea; submarine cables and important steamship routes; standard time (Maps No. 5 and No. 73), and the "date-line" (Map No. 1); important highways and caravan routes in countries where there are few railroads or none; lines of equal depth of water corresponding to the "contour-lines" on land; important lights and lighthouses; a special travel-map of Central Europe; etc.

A number of historical maps also have been included, in which are given many of the more important names of ancient geography, as well as certain of the main points in modern historical geography. They are about equally divided between ancient and modern history, and comprise 40 maps, including plans of the ancient cities of Jerusalem, Rome, and Athens.

In the choice of types, the arrangement of the names, and the coloring of the maps, the greatest legibility possible has first of all been sought, while variety and attractiveness to the eye have not been neglected.

Finally, not the least important characteristic of the book is its convenient size, since it is almost alone among the atlases which contain approximately the same amount of information, in being as easily handled and consulted as a volume of a cyclopedia.

#### NOTE TO THE EDITION OF 1911.

Since the publication of the Century Atlas in 1897 it has repeatedly been revised and enlarged. The most notable of these revisions, prior to that of the present year, were embodied in the editions of 1899 and 1901. In the former all of the maps were carefully brought down to date and new ones were added in order to show, in great detail, the field of operation of the Spanish-American War and the then recent additions to the territory of the United States. Among these were a map, on a large scale, of the Hawaiian Islands and the Philippine Islands (118), with inset maps of Honolulu and vicinity and Manila Bay; a map of Porto Rico and the Lesser Antilles (68½); and inset maps of Havana and vicinity and Santiago de Cuba (68) and of the Ladrone Islands and the island of Guam (117). A new and very detailed map (107½) of eastern China, with southern Manchuria, was also added, which shows the principal field of operations of the Russo-Japanese War; and additions were made to the map of northern England (76) showing in detail the region about Liverpool and Manchester. In the map of Georgia (38) was inserted a map of Chickamauga National Park.

The edition of 1901 comprised a further revision of the maps, including the addition of the recently incorporated places not contained in the previous editions of the Atlas, and the insertion in the "Index to Modern Maps" of the results of various censuses, especially of the United States census of 1900.

In the present edition this process of revision has been carried out with even greater completeness, and many notable additions to the Atlas have been made. The additional matter comprises a new and enlarged map of Alaska (58) which gives the results of recent explorations and surveys, the names of new settlements, the sites of important coal-fields and gold-deposits, and the contour-lines of elevation; new maps of Canada (59, 60, 63) which exhibit the results of recent surveys and development in that important and hitherto imperfectly mapped region; a map of the new State of Oklahoma (48); an elaborate and instructive map of the South Polar Region (3½), the present focus of geographical interest, on which are traced the routes of all the Antarctic explorers; and two interesting maps (5a, 5b) which show with great completeness the development of interurban electric lines (trolleys) in the north-central and north-eastern United States. All the other maps have been very carefully corrected in order to include the most recent political and geographical changes. Modifications of boundaries, in particular, have been marked; recently incorporated places have been added; and the corrections effected by recent surveys have been shown when the scale of the maps has permitted. The railroads have been brought down to date with a high degree of completeness, the additions including not only new lines but also extensions of old lines, and proposed lines. The addition of the new and the revision of the old maps have introduced into the Atlas upward of 10,000 new names which have been incorporated in the "Index of Modern Maps," increasing the number of names included in it to over 180,000. This index, which comprises over 400 pages, has been entirely reset, and in it have been incorporated the figures of the United States census of 1910 and of all other recent censuses and authoritative estimates.

No. 1

THE WORLD.  
(MERCATOR PROJECTION.)

1877  
BY THE  
GEORGE F. W. H. & CO.

Principal Railroad Lines.....  
Principal Steamship Routes.....  
The Fastest Route Around the World  
(64 days) is shown in a heavier red line.  
Principal Telegraph and Cable Lines.....  
International Date Line.....  
Extremes Limits of Icebergs.....  
Cold Ocean Currents.....  
Warm Ocean Currents.....  
The distances along Steamship Lines  
on this Map are given in Nautical Miles.

# THE CENTURY ATLAS. THE WORLD ON MERCATOR'S PROJECTION, SHOWING THE CHIEF COUNTRIES and their COLONIES, ALSO THE OCEAN CURRENTS AND THE PRINCIPAL ROUTES OF TRAVEL.

Copyright, 1897 and 1911, by The Century Co.  
United States..... Russia..... Spain.....  
England..... Denmark..... Portugal.....  
Germany..... Netherlands..... Italy.....  
France..... Belgium..... Turkey.....  
Japan.....  
Countries without Foreign Possessions.....

NOTE.—This line has been universally adopted as the most convenient location for change of date; in crossing this line the date is set ahead or back one whole day according to direction of passage.

Map of the Great Lakes region, showing cities, rivers, and geographical features. The map includes labels for major cities like Detroit, Toledo, and Cleveland, as well as smaller towns and villages. It also shows the Great Lakes themselves, with Lake Superior, Lake Michigan, Lake Huron, Lake Erie, and Lake Ontario. The map is oriented with North at the top and includes a grid system for location finding.

ENGLAND AND WALES,  
SOUTHERN PART.

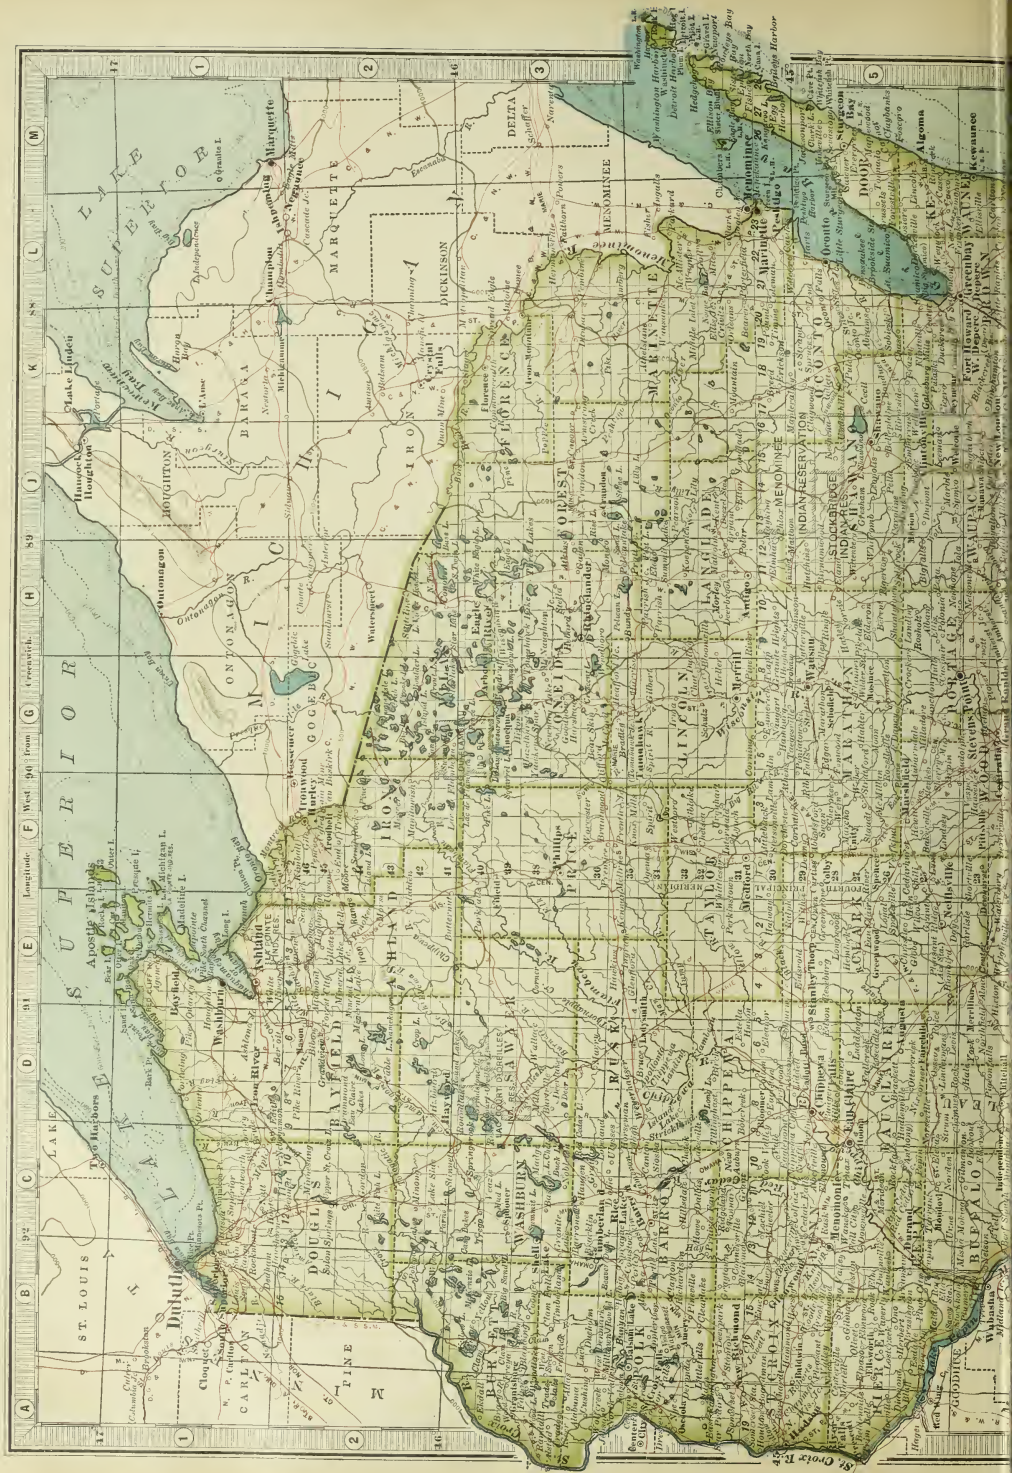

LIBRARY  
OF THE  
UNIVERSITY OF ILLINOIS

The United Kingdom of Great Britain and Ireland consists of the following Divisions:

Division	Area (Square Miles)
England	93,687
Wales	7,412
Scotland	29,785
Ireland	32,583
Isle of Man	227
Channel Islands	75

England and Wales are divided geographically into 62 counties and for administrative purposes into 62 (the number being increased by dividing Cambridge, Lincoln, Northampton, Hants, Suffolk, Sussex and York, and by the county of London). Only the former are given here. The County Boroughs (75) are administered by a Municipal Corporation, independent of the County Council.

THE MATTHEW-NORTHUP CO., BUFFALO, N. Y.

British India comprises all that part of the great Indian peninsula which is directly or indirectly under British rule, or under the control or protection of the Governor General of India.

The territory directly under British control is divided into provinces as follows:

PROVINCES.	POPULATION.	AREA.
BENGALEE	81,128	82,898
UPPER BENGAL	87,428	8,228
LOWER BENGAL	88,152	29,433
ASSAM	857,838	80,900
BOMBAY	275,824	129,997
BRITISH IN INDIA	480,434	9,000
CEYLON	83,198	13,000
AFGHANISTAN	23,960	25,641
AFGHANISTAN	2,711	9,900
AFGHANISTAN	97,200	2,856
AFGHANISTAN	15,456	1,381
AFGHANISTAN	46,960	13,002
AFGHANISTAN	75,528	1,307
AFGHANISTAN	47,028	4,088
AFGHANISTAN	80	883
AFGHANISTAN	82,234	4,180
AFGHANISTAN	17,716	2,818
AFGHANISTAN	141,726	2,143
AFGHANISTAN	141,726	2,143
AFGHANISTAN	141,726	2,143

Nepal (54,000 sq. miles) and Bhutan (about 20,000 sq. miles) are independent States in the Himalayas.

The name Korea is authoritatively changed by the Japanese Government to **CHOSŌN**, which is universally used in Japan and is also adopted by the U. S. Geographic Board.

NOTE: - Japan is divided in six territorial grand divisions: Yezo, Northern Honshu, Central Honshu, Western Honshu, Kiu-siu, and Ryukyu. For local administration Japan is divided into districts ("ken"), the boundaries of which are shown on the map. The most cases the same as those of their capitals. The latter are special townmarks and by a pink line under name. If the name differs from the name of its capital, the former is inserted in *italics*.

During the Spanish-American War the Spanish fleet was destroyed in Manila Bay, May 1, 1898. The authorities at Manila capitulated to the United States, August 13, 1898.

The Islands were ceded to the United States by the treaty of peace signed at Paris December 10, 1898.

Computed in square miles.  
Area and population to be changed as result of Turko-Balkan War, 1912-13.  
Area figures for Canada and for the United States include land and water.

INDEX TO MODERN MAPS.

# INDEX TO MODERN MAPS.

The figures of the United States Census, taken June 1, 1910, are given in the index.

THIS index contains all the names (about 180,000) of places, rivers, mountains, capes, etc., given on the modern maps of The Century Atlas. Each line begins with the name of a place, or a river, or a mountain, etc., followed by the name of the country, state, or large division in which it is found; the population (when the name is that of a place, country, etc.); the map-number; and the reference letter and figure, by means of which the exact location of the place upon the map may be ascertained. Thus, in the map of Edinburgh would be indexed B 3: the squares are formed on the map by the lines of longitude and latitude, and the reference letters and figures are placed on the borders of the map. The maps of the world are divided into hemispheres, the region around the North Pole, the region about the South Pole, and the islands of the Pacific Ocean (including Maps 118), are indexed by imaginary squares formed by the space between each letter and figure. Inset maps are indexed by imaginary squares formed by the meridians and parallels of the main map extended across them. Names, such as *Mount Vesuvius* or *Lake Erie*, have been indexed both under the proper name (*Vesuvius*, *Erie*) and under the descriptive noun (*Mount*, *Lake*). Names which are not on the map proper and also on an inset map have been indexed where they appear to the best advantage; the largest places, however, have been indexed twice and referred to both maps. Rivers are

indexed where the name is most readily found; those that flow through several of the United States are indexed from the general map of the United States. In an outlying possession (such as Corsica) which is shown in an inset map, the names are identified by the general title (for example, "France") of the map in which they occur.

Where a place may be known under different names or by various spellings of the same name, the different forms have, to a large extent, been inserted in the index and referred to the one which appears on the map.

The figures for population have, as far as practicable, been taken from the latest official censuses.

For places in the United States the population-number indicates, as a rule, the population that is represented by a post-office (that of a city, incorporated borough, or village or hamlet) of which the name is printed on the map; it does not indicate the population of the township or other division of the same name in which the post-office (often with others having different names) is situated. In some cases, however, particularly in New England, New York, and New Jersey, the figures for the township having the same name as the post-office are also given. The population of all incorporated places is given as reported in the official census of 1910. For all smaller places with over 100 inhabitants, which are not separately reported in the census of 1910, the population as estimated by the best local authorities has been given.
